

CDOT to begin US 34 north of Granby resurfacing project

What work is being done?

On June 22, Colorado Department of Transportation (CDOT) and contract partner Elam Construction will begin surface treatment work on US Highway 34 and US Highway 40 near Granby. The surface treatment project will begin on US 34 at Mile Point 0 and will continue for 15 miles to MP 15. On US 40, the work will take place from MP 210.9 to MP 211.25. This is near the intersection of US 34 and US 40. The project has an anticipated completion date mid-November.

Work throughout the project will consist of hot mix asphalt overlay, guardrail installation, shoulder work and milling.

Why is the work being completed?

As part of CDOT's Whole System-Whole Safety initiative, this project will focus on a hot mix asphalt overlay and installing guardrail that meet the new safety standard requirements. The HMA will add approximately 10 years of life to the highway, a smoother road surface and will eliminate ruts and road damage. The new guardrail will be 31" high instead of 27" high to help vehicles remain on the road more effectively making the highway safer for the traveling public.

When will crews be working?

The project will be in operation Monday through Thursday from 7 a.m. to 7 p.m. and Friday from 7 a.m. to 12 p.m.

Travel Impacts

Motorists can expect one-lane alternating traffic, 20 minute delays, reduced speeds and a 10 ft. width restriction during hours of operation.
